Caratteristiche tecniche armadi

Gli armadi metallici costituiscono una gamma ampia e diversificata capace di offrire sempre soluzioni per l'archiviazione versatili e di qualità. Gli armadi sono realizzati interamente in lamiera di acciaio da mm. 8/10 pres-sopiegata e adeguatamente rinforzata.

La struttura di ogni armadio si compone di una base e di un cappello, entrambi predisposti sui lati corti per l'ancoraggio ai fianchi e su quelli lunghi per ricevere i differenti tipi di chiusura. I fianchi realizzati in lamiera di spessore mm. 8/10 sono rinforzati nella parte inferiore e sono dotati dei quattro spigoli esterni verticali raggiati (R8).

La chiusura posteriore è realizzata in lamiera con un pannello unico mentre per gli armadi di cm. 180 è ottenuta con due pannelli. In entrambi i casi i pannelli sono dotati di fori che ne consentono il fissaggio sia dall'esterno del contenitore che dall'interno, garantendo in questo caso una perfetta rifinitura del mobile e la possibilità di utilizzo degli armadi come elementi divisorii. Gli armadi sono corredati di ripiani regolabili in altezza e predisposti per contenere cartelle sospese. Agli armadi così ottenuti è possibile abbinare una serie di ante di chiusura quali ante a battente, ante scorrevoli in lamiera, ante scorrevoli in vetro anche temperato e ante scorrevoli in rete.

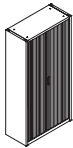

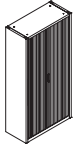

The steel cupboards include a wide and diversified range of high quality and versatile storage solutions. The cupboards are made entirely from 0,8 mm thick bent and reinforced sheet steel.

The structure of each cupboard is made up of a top and base; the short sides are predisposed for the fixing of the side panels and the long sides are predisposed for the different kinds of doors. The 0,8 mm thick steel side panels are reinforced internally and have four vertical rounded external edges (R8). The back panel is made from a single steel panel, while 180 cm cupboards are made from two panels.

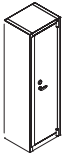

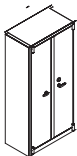

In both cases the back panels are fitted with holes allowing for an internal and external assembly, assuring in this way a perfect finish to the cupboards and the possibility of creating partition elements. The cupboards are fitted with 4 height adjustable shelves that hold hanging files. All open cupboards can be fitted with a wide range of doors such as double doors, steel sliding doors, glass (and toughened glass) sliding doors and wire mesh doors.

Caratteristiche tecniche armadi di sicurezza

Armadi realizzati a struttura componibile autoportante, in lamiera di acciaio di prima scelta DD11 UNI EN 10111, da mm 30/10 di spessore verniciati con polveri elettrostatiche di resine epossipoliestere, previo trattamento di fosfosgrassaggio.

I fianchi, il top e la base sono realizzati con lamiera pressopiegata da mm 3 di spessore saldati a filo continuo negli elementi di assemblaggio.

I 4 ripiani sono del tipo regolabile su cremagliera.

Le ante battenti ruotano a 180° su cerniere di acciaio.

La chiusura dell'armadio è ottenuta mediante n. 3 robustissimi chiavistelli, bloccanti l'anta al centro, in alto e in basso, azionati dall'esterno mediante maniglia e controllata da una serratura di sicurezza con chiave a doppia mappa in duplice esemplare.

Technical features security cabinets

Freestanding, modular cabinets made from first grade DD11 UNI EN 10111 Steel sheet of 30/10 mm, pre-treated with phosphodegreasing then epoxy-polyester powder coated.

The sides, top and base are made from mm 3 thick press-formed steel sheet, continuously wire welded for the assembling elements.

The 4 Shelves are adjustable on rack.

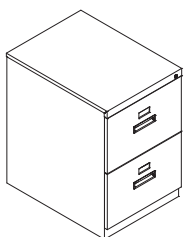

The hinged doors rotate 180° on steel hinges.

The closure of the cabinet is obtained by n. 3 latch locks, blocking the door to the center, top and bottom, operated by handle from the outside and controlled by a security lock with double-bit key in duplicate.

Caratteristiche tecniche scaffalature Brev N. 821500

Realizzata con tubolari a sezione rettangolare e lamiere di acciaio 8/10 di prima scelta tipo DC01 UNI EN 10130, verniciata con polveri elettrostatiche di resine epossipoliestere, piani regolabili ogni 10 cm rinforzati con canotti ad omega.

Il sistema ad incastro consente una rapida posa in opera senza l'ausilio di nessun attrezzo.

Sono inoltre disponibili diversi tipi di accessori che arricchiscono la serie e consentono di adattarla a qualsiasi tipo di esigenza.

Technical Features shelving Pat No. 821 500

Made with tubular and rectangular section steel sheet 8/10 of first grade DC01 UNI EN 10130, painted with electrostatic powder epoxy resin, reinforced with adjustable shelves each 10 cm, sleeves omega.

The interlocking system enables rapid installation without the aid of any tool.

There are also different kinds of accessories that enrich the range and allow to suite any need.
